# FRANKLIN US INDEX (FTUSLX)

Charting a course toward growth

## INDEX OVERVIEW

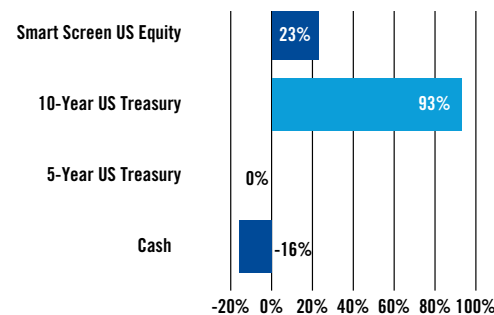

Inception	November 13, 2017
Volatility target	7%
Frequency of rebalancing	Daily
Number of holdings	3
Exchange	FTUSLX

## INDEX OBJECTIVE

A US-multi-asset index designed to deliver attractive risk-adjusted returns with an annualized target volatility of 7%.

## ALLOCATION SNAPSHOT

As of June 30, 2020

## Commentary

During the second quarter, US stocks came back from their first-quarter pandemic plunge with one of their best quarters in decades. Better-than-expected May and June US economic data suggested the stock market rebound reflected expectations for improving fundamentals. Intermediate US Treasury (UST) yields fell modestly over the quarter as shorter- and longer-term yields rose. Yields on the benchmark 10-year UST ended the period one basis point lower compared to prior quarter-end levels. The US Federal Reserve continued to reinforce its commitment to maintain the flow of credit to both businesses and individuals, and to provide extraordinary liquidity support to financial markets. The Cboe Volatility Index calmed during the second quarter, though it remained at somewhat elevated levels following its surge in the first quarter.

For the period from April 1 to June 30, 2020, the Franklin US Index returned 2.3% with 3.7% annualized volatility of daily returns. With volatility easing from the heights of the first quarter, the index increased exposure to equities, starting at 7% on April 1 and closing the period at 22% on June 30, with an average allocation of 15%. The index also increased exposure to 10-year US Treasury notes, opening the quarter with a 68% allocation and closing at 93%, with an average exposure of 87%. Cash had been used as a safe harbor in March but was steadily reduced during the reporting period, declining from a peak of 25% on April 1 to -15% on June 30.

## PERFORMANCE

As of June 30, 2020

	Cumulative				Annualized				
	MTD	QTD	YTD	1Y	3Y	5Y	7Y	10Y	Incept

Source: Bloomberg. The Franklin US Index is an excess return index. The index levels represent performance in excess of the 3-month US Dollar LIBOR rate. All information for the index prior to its launch date is back-tested, based on the methodology that was in effect on the launch date on November 13, 2017. Back-tested performance, which is hypothetical, is subject to inherent limitations because it reflects application of an index methodology and selection of index constituents in hindsight. No theoretical approach can take into account all of the factors in the markets in general and the impact of decisions that might have been made during the actual operation of an index. Actual returns may differ from, and be lower than back-tested returns. The performance data does not reflect the deduction of any fees/charges and assumes reinvestment of interest or dividends. There can be no assurance that implementation of managed volatility strategies will produce desired results. Hypothetical performance information is not indicative or a guarantee of future results. It is not possible to invest directly in an index.

Please consult your financial professional for more information.

#### **NOTES ON PERFORMANCE CALCULATIONS**

Performance information in this presentation is for illustrative purposes only and includes hypothetical, back-tested returns as well as post-launch returns of the index.

A target volatility is not total return performance—it should not be expected that the index's total return performance would be any specific level or within any specified range or provide competitive returns. It is possible that the index could meet a target volatility level while having negative performance returns.

There can be no guarantee that the index will reduce volatility or achieve any specific level of volatility. The target volatility may expose the index to negative performance (some of which may be sudden).

The actual volatility that the index experiences may be significantly higher or lower than that sought by the investment manager at any time and for any period of time. The target volatility could limit the index's performance in rising markets and may expose the portfolio to costs to which it would otherwise not have been exposed.

The Franklin US Index (the "Index") is the property of Franklin Templeton, which has contracted with S&P Opco, LLC (a subsidiary of S&P Dow Jones Indices LLC) to calculate and maintain the Index. The Index is not sponsored by S&P Dow Jones Indices or its affiliates or its third party licensors (collectively, "S&P Dow Jones Indices"). S&P Dow Jones Indices will not be liable for any errors or omissions in calculating the Index. S&P® and the S&P 500 Index are registered trademarks of Standard & Poor's Financial Services LLC ("SPFS"), and Dow Jones® is a registered trademark of Dow Jones Trademark Holdings LLC ("Dow Jones").

It is not possible to invest directly in an index. There is no assurance that investment products based on the Index will accurately track index performance or provide positive investment returns. Inclusion of a security within an index is not a recommendation by Franklin Templeton or S&P Dow Jones Indices to buy, sell, or hold such security.

Products based on the Index are not sponsored, endorsed, sold or promoted by Franklin Templeton and Franklin Templeton has no responsibilities, obligations or duties to purchasers of such products. This information should not be relied upon as investment advice, research, or a recommendation by Franklin Templeton regarding (i) any products tied to the Franklin US Index, (ii) the use or suitability of the Franklin US Index, or (iii) any security in particular. This material is strictly for illustrative and educational purposes and should not be construed as a recommendation to purchase or sell, an offer to sell, or a solicitation of an offer to buy, any product or security or to use any index. There is no guarantee that any strategies utilizing the index will be effective or successful. Multi-asset indices and diversification do not promise any level of performance, success, or guarantee against loss of principal.

The hypothetical performance information presented herein does not reflect the results of actual trading and calculation of the index levels and performance do not reflect the fees and expenses that an investor would pay. These fees and expenses would cause the actual and back-tested performance of the index to be lower. For example, if an investor invested \$100,000 in an investment product that returned 10% (\$10,000 in gains) over a 12-month period and was charged an asset-based fee of 1.5% at the end of the period on the investment plus gains (a \$1,650 fee), the investor's net return would be 8.35% (\$8,350). Over three years, an annual 1.5% fee taken at the end of each year with the same assumed 10% return per year would result in a cumulative gross return of 33.10% but a net return (after \$5,375 in fees) of 27.2%.

#### **WHAT ARE THE RISKS?**

Stock prices fluctuate, sometimes rapidly and dramatically, due to factors affecting individual companies, particular industries or sectors, or general market conditions. Bond prices generally move in the opposite direction of interest rates. Thus, as the prices of bonds in an investment portfolio adjust to a rise in interest rates, the performance of the index may decline.
